Education

Vellore Institute of Technology, Vellore

2022 – 2026

B.Tech in Computer Science and Engineering | CGPA: 8.20 (current)

CBSE Board, Bhilwara

2021

Senior Secondary (Class XII) | Percentage: 90.8%

Internship

Kanchan India Limited

Jun 2024 – Jul 2024

SAP Intern

- Streamlined sales order processing by introducing automated validation rules that minimized manual checks and improved overall accuracy.
- Delivered clear process visibility through KPI dashboards, enabling real-time monitoring of sales pipeline health.
- Simulated an end-to-end sales order automation scenario with master data setup, workflow rules, and performance measurement, demonstrating a ~50% reduction in manual processing time in test runs.

Projects

AI-Powered Request Processing Workflow | *Python, SQLite, pydantic, groq API*

- Built an AI request processing system using Groq Llama 3.3 70B + Streamlit that classifies customer requests and routes them through 4 distinct multi-step remediation workflows with >80% accuracy.
- Implemented confidence-based routing with JSON-mode structured outputs, Pydantic validation, retry logic, and a human-in-the-loop review queue for edge cases.
- Delivered full-stack prototype with batch processing, Plotly analytics dashboard, SQLite audit trail, and one-click Streamlit Cloud deployment.

AI-Based Smartphone Addiction Detection System (BARI) | *Scikit-learn, Python, Kotlin, Jetpack Compose*

- Developed **BARI** (Behavioural Addiction Risk Index), an AI-based Android application that passively detects smartphone addiction risk in adolescents using live device usage data, eliminating reliance on self-report questionnaires.
- Engineered a composite ML feature index aggregating 5 behavioural signals (screen time, social media usage, nocturnal activity, phone check frequency, app diversity) and trained a Random Forest classifier achieving **96.16% accuracy** and **0.96 recall** on the at-risk class with zero false negatives.
- Built a full-stack system with a **Kotlin/Jetpack Compose** Android client and **Python Flask** ML backend, implementing 3 novel signal extraction algorithms for real-time on-device risk scoring without network dependency.

InterviewIQ: Agentic Interview Platform | *Python, FastAPI, LangGraph, ChromaDB, Gemini*

- Built **RAG** pipeline with PDF ingestion, sentence-transformers embeddings, and ChromaDB vector store with PII scrubbing and per-session isolation.
- Engineered **LangGraph** agent with RAG retrieval, web search, and LLM-based answer scoring; benchmarked Gemini, Llama 3.1, and Mixtral on quality, latency, and cost.
- Built **35-case** eval suite covering hallucination, prompt injection, and PII leakage with GitHub Actions CI; added voice interview feature using Web Speech API for real-time STT/TTS with dynamic follow-up generation.

Technical Skills

- Programming Languages:** Java, JavaScript, Python, C++
- Web Development:** HTML, CSS, Node.js, Express.js, React.js, Next.js
- Database Management:** MongoDB, MySQL, firebase
- Tools & Cloud Platforms:** GitHub, langGraph, AWS
- Core Concepts:** Data Structures & Algorithms, REST APIs, Machine Learning, Agentic AI, generative AI

Certifications

Microsoft Certified: AI-900 – Microsoft Azure AI Fundamentals

Oracle Certified AI Foundations Associate – Oracle Cloud Infrastructure

Blockchain and Web3: A Beginner's Guide

Position of Responsibility

Core Member, TAG – Technology and Gaming Club, VIT: Organized 10+ campus-wide events with 200+ participants, managing logistics and technical coordination.

Volunteer – Riviera Cultural Fest, VIT: Contributed to the successful execution of major events including *Escape the Matrix* and *Bollywood Bash* as part of the Matrix Club.
